

Trigger Context Variables

All triggers define implicit variables that allow developer to access run-time context. These variables are contained in the `System.Trigger` class.

- **isExecuting**
 - Returns true if the current context of Apex code is a trigger, not a VF page, a web service, or an `executeanonymous()` API call.
- **isInsert**
 - Returns true if trigger was fired due to an insert operation, from the Salesforce IT, Apex or API.
- **isUpdate**
 - Returns true if trigger was fired due to an update operation, from the Salesforce IT, Apex or API.

What is Report?

- Report is a list of records related to objects that meet the criteria defined.
- One can filter, group and do maths on reports.
- One can display reports graphically through charts.
- Every report is stored in a folder.
- Report folders determines how one can access reports to View, Edit, or Manage.
- Report folders can be public, hidden, or shared.

Donation Manager

- ☐ can edit basic contact information as well as any information relevant to donations or donor attributes.
- ☐ can access to Accounts Opportunities and Contacts
- ☐ They can mark a Contact as at risk but cannot remove the at risk setting.
